

Circle Angle Theorems & Postulates

3/17
pd 4

(52) All circles are similar

(53) The measure of a central angle is equal to the measure of its minor arc.
p. ~~604~~ 613(?)

(54) The measure of an inscribed angle is half the measure of its intercepted arc. p. 613

(55) The measure of an inscribed angle is half the measure of the central ~~angle~~ that intercepts the same arc.

(56) If two inscribed angles intercept the same arc, then their measures are equal.
